Seneca Federal Solutions, LLC (Seneca Federal), is a tribally owned, certified 8(a) Small Disadvantaged Business offering our Department of Defense and Federal Civilian customers with critical infrastructure solutions that enable increased security, real-time unified communications, and power cooling energy efficiencies for both classified and unclassified environments.

Our experienced team specializes in facility operations and maintenance, design and construction of secure facilities, data center cooling solutions, installation and certification of critical power supplies, data, voice and video networks, and the design and maintenance of telecommunications towers and distributed antenna systems. With our expansive portfolio of experience and highly certified engineers, we provide single source solutions and comprehensive services that are customized to the specific needs of each customer and mission-critical facility.

Benefits of Working with Seneca Federal Solutions

Strong partnership with our small business teammates and understanding what it takes for operational success.

Financially stable with seasoned back-office infrastructure, while remaining **agile and flexible**.

Robust and applicable past performance ratings.

Outstanding **record of recruiting and retaining high-quality employees.**

8(a) Direct Award Process

Submit Request to SBA
Complete the SBA 8(a) request offering per FAR 19.804 19.804-2 and send it to Seneca Federal's SBA representative.

Contract Negotiations
SBA sends an Approval Letter authorizing the requesting agency to enter contract negotiations with Seneca Federal.

Contract Award & SBA Approval Letter
Once a contract is executed, a copy of the contract and SBA approval letter is sent to the SBA representative.

Our Federal Capabilities

Secure Facilities

- Intelligence Readiness Operation Centers (IROCS)
- Command & Control Centers
- Secure Compartmented Information Facilities (SCIF)
- Secure Server Rooms
- Special Access Programs
- RF & EMP Shielding

Power & HVAC

- Engine Generators (EG)
- Uninterrupted Power Supplies (UPS)
- Data Center Cooling Solutions
- Data Center Fluid Dynamic Modeling
- Maintenance Programs

Telecommunications

- Communication Towers
- Distributed Antenna Systems (DAS)
- Inside/Outside Fiber Plant
- Managed Access Systems
- Counter Drone Technology

Tenant Improvement

- Furniture, Fixtures and Equipment (FF&E)
- SCADA/Building Automation
- Energy Management
- Lighting Controls

Network & Communications

- Video Teleconferencing Centers
- Audio/Visual
- Public Address Systems
- Mass Notification Systems

Control Systems

- Access Control Systems (ACS)
- Intrusion Detection Systems (IDS)

Seneca Federal Solutions and Seneca Nation Group Representative Contracts

U.S. Army Corps of Engineers (USACE) Engineering Research Development Center (ERDC) Microgrid:

Seneca provides technical expertise, infrastructure support, installation services, and management oversight to develop an uninterruptible microgrid system for ERDC. This system provides an independent, deployable power solution to supplement power sources in the event of a disruption to the facility.

U.S. Central Command (CENTCOM) Uninterruptable Power Supply (UPS): Seneca provided life cycle replacement of the UPS system and power distribution updates in cooperation with CENTCOM and the Defense Intelligence Agency's input for new and anticipated future loads that exceed the current capabilities of the spaces. Seneca performed a mechanical engineering study to provide recommendations for upgrades to the mechanical system that the new electrical design required.

Federal Bureau of Prisons (BOP) Camera and Single Mode Fiber (SMF) Installation: Seneca successfully installed SMF in approximately 65 BOP facilities, enhancing the communication infrastructure for federal prisons. We reduced operational downtime during installation by leveraging advanced trenchless technology for cable laying, ensuring minimal disruption to daily prison activities.

Buckley Space Force Base Joint Reserve Intelligence Program (JRIP) Upgrades: Seneca integrated HVAC equipment and infrastructure at the Denver (Buckley Space Force Base) Joint Reserve Intelligence Center (JRIC) complex. The objective of this effort was to achieve a modern, safe, secure, collaboration intensive, environmentally controlled and energy efficient JRIC work area.

USACE Wiesbaden Building 1031 Fire Safety: Seneca provides all labor, tools, materials, documentation, equipment, transportation, supervision, and management necessary to design and repair fire protection deficiencies at an operational building located at an OCONUS military installation (U.S. Army Garrison Wiesbaden, Germany), requiring compliance with current International Building Codes, base, and local ordinances for the 66th Military Intelligence Brigade.
